Hardware Laboratory Rules

The Hardware Lab (room 207/347) is a multi-use research space designed to support a wide variety of research within the domains of computer systems design, real-time and embedded systems, and cyber-physical systems.

As a courtesy to others, researchers and students must observe the following rules:

1- Please maintain a friendly and quiet lab for everyone to do his or her work.

2- Please be considerate regarding noise levels since other researchers are working in the lab.

3- Maintain a quiet work area: loud boisterous behavior is not acceptable; the lab is not a place to socialize, as it’s distracting to others.

4- No talking on the phone - all conversations should be conducted outside of the lab for your privacy and the privacy of others.

5- No excessive texting or messaging in the lab.

6- When in the lab, the ringer on your phone must be turned off.

7- No loud headphones - if any one sitting next to you can overhear your music, you will be asked to turn down the sound or leave the lab.

8- No food is allowed in the lab.

9- Beverages are permitted, but must be carried in covered containers that are both spill-proof and leak-proof.

10- Please sign the lab sheet at the begin and end of your daily lab activities.

11- Workstations or laptops are multi-purpose and multi-user, so please avoid downloading or storing personal information on them.

12- Clean workplaces and good personal hygiene are expected in the lab.

**Failure to adhere to this policy will result in revocation of lab privileges.**
